Student Self-assessment to Enhance Learning in Pharmacotherapeutics

Tan Lay Khee
Goh Hoon Bee, Kathryn
Vijayan N.

Temasek Polytechnic
Singapore
I'm gonna need more specific feedback on my formative assessments.
“I expect you all to be independent, innovative, critical thinkers who will do exactly as I say!”

http://failingtolearnbetter.blogspot.sg/
Student Self-assessment

“Development of skilled and flexible learners who can move beyond the boundaries of what their course prepares them for, focuses attention \textcolor{red}{not just on learning how to learn} but on the subset of this to which often neglected: learning how to assess. Students must be \textcolor{red}{effective self-assessors}; to be anything less is to be dangerously ill prepared to cope with change.”

Boud (2000), p160
Student Self-assessment

• “Preparing students for lifelong learning necessarily involves preparing them for the tasks of making complex judgements about their own work and that of others and for making decisions in the uncertain and unpredictable circumstances in which they will find themselves in the future.”

Boud & Falchikov (2006), p402
Self-assessment in Pharmacy Education

- Self-assessment forms the foundation upon which the cycle of continuous professional development is built.
- The reflective practice drives the continuous effort to enhance competence in professional practice.

Mort & Hansen (2010)
Background

- Subject: Introduction to Pharmacotherapeutics
- Read by level 2, polytechnic students
- Cohort size: 107
Self-Assessment Project

- Generate patient assessment questions
- Self-assessment

Patient Interview

Mock Role-play
- Video-recording
- Self-assessment

Role-play
- Summative assessment
Design of the Self-assessment Project

• There were opportunities to complete the feedback loop and thus these enabled the students to employ their action plans.

  ▫ Modelling the full assessment process in new situations enables the students to apply the feedback / strategies and gain confidence that these are effective in helping them attain the desired outcomes. (Boud, 2000)
Research Question

• What is the impact of student self-assessment on student learning?
Data Collection

• Conducted online student survey (n=100)
  ▫ Instrument comprises 4-point Likert-scale closed-ended questions and open-ended questions

• Reviewed students’ self-assessment logs
# Results – Survey Findings

*SA – strongly agree; A – agree; D – disagree; SD – strongly disagree; NA – not applicable
Results – Survey Findings

“I think that self-assessing can really help me improve in my work because it can remind me the important details and information that are needed to be included. The self-assessment also stimulate [sic] my thinking by planning action plans to ensure that I can excel in my work.”

(Student 1)
Results – Survey Findings

“Through the self-assessment exercises, I learn to evaluate situations on a deeper level instead of the usual superficial stuff. Self assessments helped me to organize my work and better present my notes to my peers to facilitate their understanding and role-play. I also learned how to identify my weaknesses as well as the action plans to improve on my weaker areas”.

(Student 2)
Results – Survey Findings

“..it helps with my learning and identify any shortcomings. Basically it allows me to be an independent learner.”

(Student 3)
### Checklist for patient interview (Week 2-3)

<table>
<thead>
<tr>
<th>Patient Assessment Questions</th>
<th>Questions asked (own group):</th>

</thead>
<tbody>
<tr>
<td>Identify medical conditions, ascertain etiology and severity</td>
<td>As attached (At the Back)</td>
</tr>
<tr>
<td>Questions asked by other groups (but not by us)*:</td>
<td></td>
</tr>
</tbody>
</table>

1. What medications have you taken, and the dose that was taken? - Rheinathol Promethazine Syrup (1 tablespoon 3 times daily) & Piriton (2 tablets 3 times daily) What was the duration of treatment? (1 day ago)
2. Was the Rheinathol Promethazine Syrup taken with food? (Yes)
3. Do you have flowers at home? (Plenty)
4. Do your eyes itch when in contact with flowers or dust? (No)
5. Did you take Piriton tablets and Rheinathol Promethazine Syrup at the same time or separately? (Separately)
6. Have you been near to people who have common cold recently? (No)
7. Did the cough appear at a later time than the other symptoms? (Runny nose, blocked nose then cough)
8. What were you doing when you experience these symptoms? (Woke up normally, go to work then go home, and it happened)

### Self-assessment

- Adequacy - ask all necessary questions
- Relevance
- Clarity of questions

- Why did I miss out those questions?*
- Why do I think those questions* are relevant?*
- What can I do to ensure I can do better in role-play?

---

*For Qn 1, we did not realise that the patient’s medical condition could be a result of drug-related problem and thus we did not ask for the dose taken. Taking the wrong dose could lead to the drug related problem-overdose or under-dose and thus we feel that these questions are relevant. We can do better by making sure to include these questions in our future role-play.

*For Qn 2, we did not know that Rhinathiol Promethazine syrup is a medication that has to be taken with food and thus we did not ask if it was taken with food. We think that the question is relevant as after researching we found out Rhinathiol promethazine syrup is to be administered with food. We can do better by finding out the administration for each drug we introduce to the patients.

*For Qn 3 & 4, we thought that by asking if the patient was allergic to pollen, was good enough. However, it proves to be unspecific as the patient may not know if they are allergic to pollen. Therefore, a better way to find out is to ask if they have flowers at home and if they experience itchiness of the eyes and nose when in contact with them. We can do better by specifying our questions so that the patients would be able to understand us, and help us in diagnosing their problem at the same time as well.
Review of Students’ Self-assessment Logs

## Review of Students’ Self-assessment Logs

<table>
<thead>
<tr>
<th>Checklist (process)</th>
<th>Self-assessment</th>
<th>Critique</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check Communication</td>
<td></td>
<td>ACTION PLAN: I should make a role-play friendly summary note for the actual role-play to ensure that everything that is mentioned is free of technical jargon. This can thus help the patient to further understand what exactly is going on without confusing him/her.</td>
</tr>
<tr>
<td>Verbal: The pace was rather consistent throughout the role-play as I did not pause for long during the recommendation of the appropriate treatment. The articulation was loud and clear throughout the whole conversation. However, there are some technical jargons being used when explaining the mechanisms of action. This might perhaps confused the patient as even my peer did not understand the terms being used. Non-Verbal: Eye contact was consistent throughout the role-play. I was confident in distinguishing between GERD and DYSPEPSIA given that the symptoms mentioned by the patients are clear cut to be either one of the medical condition. Also, the other medical condition was direct and I know that it needed referral to doctor.</td>
<td>ACTION PLAN: I should make a role-play friendly summary note for the actual role-play to ensure that everything that is mentioned is free of technical jargon. This can thus help the patient to further understand what exactly is going on without confusing him/her.</td>
<td></td>
</tr>

*Checklist to ensure PAQ is comprehensive:

- Identify medical conditions
- Ascertain etiology
- Determine severity of condition
- Identifying best treatment for patient

Product Recommendation

The product that I have recommended was Losec which meets the needs of the patient. However, it was the wrong recommendation as it resulted in drug related problem (patient was taking warfarin). Therefore, it would have resulted in severe consequences if this were to happen in a real case scenario. Hence, something has to be done to surface this problem.

**Critique**

**Action Plan**
The product that I have recommended was Losec which meets the needs of the patient. However, it was the wrong recommendation as it resulted in drug related problem (patient was taking warfarin). Therefore, it would have resulted in severe consequences if this were to happen in a real case scenario. Hence, something has to be done to surface this problem.

Action Plan: Highlight all contraindications and drug-drug interactions in the summary notes and to memorize the most common ones so that it will ring a bell once the patient mention it. This will be able to prevent the recommendation of the wrong treatment.
Conclusion

• Students’ feedback was generally positive and
  ▫ most recognized the value of self-assessment

• Review of the students’ reflections revealed that the students demonstrated their:
  ▫ Ability to evaluate the strengths and weakness
  ▫ Potential as self-regulated learners who are able to synthesize improved ideas and action plan
